The quick brown fox jumps over the lazy dog. 0123456789
Body text: Times-Roman 10 pt on 12 pt leading, left edge at x = 72 pt.
Each baseline is 12 pt below the one above it; this is the third line.
Punctuation: (round) [square] {curly} “double” ‘single’ – en — em … ellipsis
Accented Latin: café, naïve, Zürich, São Paulo, Ångström, œuvre, Æsop, façade.
This line is set in Times-Italic 10 pt.
This line is set in Times-Bold 10 pt.
This line is red: DeviceRGB (1, 0, 0).
Scripts: $E = mc^2$ and $x^2 + y^2 = z^2$ (superscripts); H_2O and CO_2 (subscripts).
Ligatures: find the flow of office files (fi is glyph /fi, fl is glyph /fl).
Letter-spaced with Tc = 1.5 pt.
Horizontally scaled to 80 percent with Tz = 80.

Two-column layout

Left column justified with Tw, right column ragged right; Times-Roman 10 pt on 12 pt leading.

Terminal viewers have to decide where every word of a page belongs on a coarse grid of character cells. A two-column page is the classic trap: if the text is read straight across the page, lines from the left and right columns interleave, and the result is nonsense. A reflow mode has to find the columns first and read the left one completely before it starts on the right one.

Hyphenation is the second trap. When a word is broken at the end of a line, as the word information is in this sentence, the two halves have to be joined again and the hyphen has to be dropped. A hyphen that belongs to the word itself, as in two-column, must be kept.

This column is justified: the space between words is stretched with the Tw operator so that every full line ends exactly at the right edge of the column. The last word of this column is split, and a correct reader joins its two halves across the column break. This column is set ragged right, so the word spacing is natural and each line simply ends where the next word would no longer fit.

Numbers and units deserve a test as well: 3.5 mm, 12 pt, 0.5 pt rules and 72 points per inch.

Both columns use the standard Times-Roman font, which is not embedded, so a viewer has to fall back to built-in metrics for the glyph widths. The page is US Letter, 612 by 792 points.

1 Footnotes use a smaller size (Times-Roman 8 pt) and sit below a short rule.
